## Our Services

### **Pre- Commissioning and Commissioning Services (Vessels)**

Pre-commissioning and commissioning services for vessels involve the crucial processes of preparing a newly built or modified vessel for its intended operational use. Pre-commissioning focuses on the initial testing and verification of systems and equipment after installation, while commissioning involves the final checks and adjustments to ensure everything functions as designed before handover to the owner

### **Preservation Services (Vessels)**

Preservation services for vessels involve specialized maintenance and protective measures to prevent deterioration and ensure the operational readiness of ships and offshore rigs during periods of inactivity or storage

# Our Services

## Ship Repair and Construction Works

This involves the regular inspection, upkeep, and repair of a vessel's systems, including the hull, machinery, electrical systems, and other critical components. It also includes underwater repairs, specialized engine work, HVAC system maintenance, and more.

## Steel, Structure and Piping

We specialize in pre-fabrication of pipe spoolers, GRE piping systems, HVAC systems, hydraulic systems, ballast water systems, and more.

# Our Services

## Mechanical Works

Our service includes removing, reinstalling, relocation, servicing, repairing and overhauling works. We are also competent in conducting tests and commissioning for marine mechanical component.

## Deck Service Crew

We provide skill manpower for on board services – piping, rigging, crane operator, rig welder, kitchen service crew, rig catering service, etc.

# Our Services

## Fabrication

Fabricators are manufacturers of assorted products using various raw materials, tools and their technical skills. Our primary responsibilities include reading and understanding assembly instructions, ensuring that the required parts are present and meeting quality control standards.

- Onshore & offshore steel structures
- Pipes / bends / flanges / supports
- Rig structures
- Post weld heat treatment
- Workshop size 6000 square feet located in Tuas

# Our Services

## Painting Works

### Surface Preparation:

This involves cleaning the vessel's exterior to remove old paint, corrosion, and other contaminants.

### Protective Coatings:

Applying various types of paints and coatings, often in multiple layers, to provide protection against the marine environment.

### Specialized Coatings:

This may involve passive fireproofing coatings or other specialized coatings for specific purposes, such as those for offshore platforms, rigs, and FPSO topsides.

### Application Methods:

Employing various techniques for applying paint, including airless spray and other methods to achieve the desired coating thickness and finish.

### Maintenance and Refurbishment:

Onboard coatings refurbishment can be carried out to extend the life of existing coatings and reduce the need for costly drydocking.

# Our Services

## Electrical

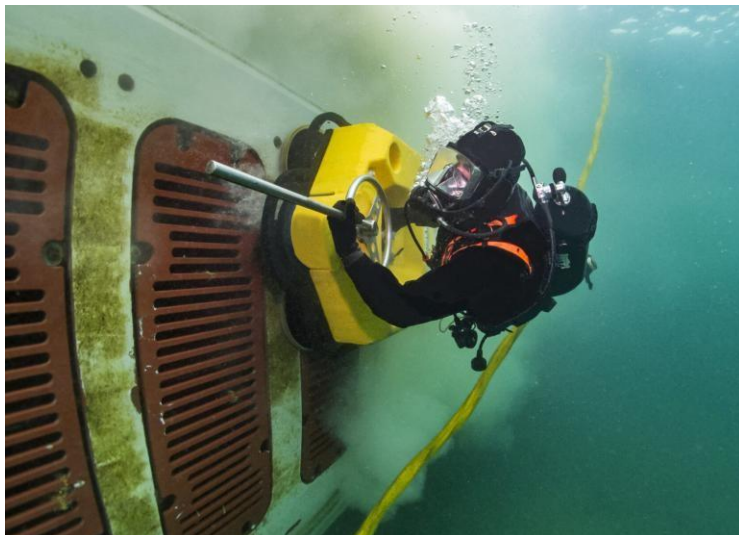

Electrical and Instrumentation Engineering refers to the discipline which deals with design of devices to measure physical quantities.

- Equipment installation
- Cable tray installation
- Cable laying
- Cable terminations
- Loop checking
- Calibration
- Mechanical completion

## Other Miscellaneous Services

- Material Supply
- Tank Cleaning
- Underwater Hull Cleaning
